

sage 50 ME Edition Intelligence Reporting

Get better insights into your data

Save time

Automate your reporting process and be more productive with your time

Customise reports

Tweak ready-to-use reports or create new ones to suit your business needs.

Work smarter

Analyse trends and business performance to make smarter business decisions.

Easy, flexible reporting

We appreciate that not all businesses report on data in the same way. We also know that creating the perfect report can take hours, if not days, to complete — especially if you prefer to create it in Excel® to make the most of its calculation and data analysis features. Sage 50 ME Edition Intelligence Reporting simplifies the reporting process for you, providing you with reports that are easy to customise and analyse.

With just a few clicks, Intelligence Reporting automates the manual reporting process and delivers reports in Excel. Reports are automatically updated with data from Sage 50; there's no manual exporting, consolidating, or cutting and pasting of data. There are no broken formulas to fix, and, there's no need to reformat the same report month after month.

You have the choice to either run customisable reports that are already formatted for you, or create new reports to suit your business's unique requirements.

Come to grips with your data

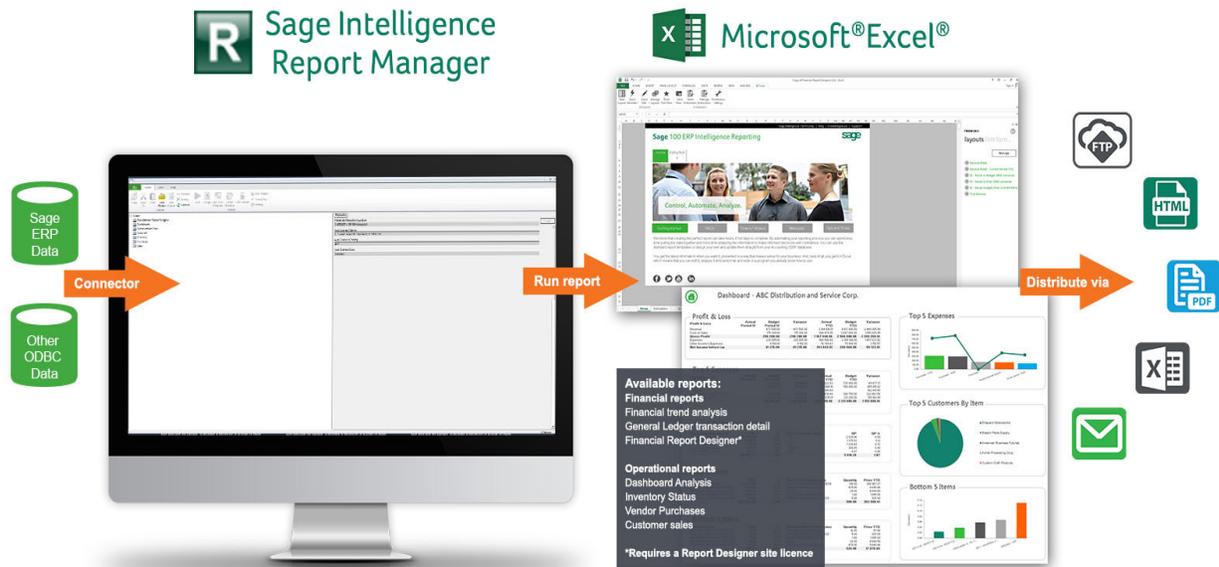

Ninety-eight percent of Sage customers¹ rely on data to either support or aid in their decision-making processes. However, there's never enough time to sort through the waves of spreadsheets, presentations, reports, and databases to find and analyse the data needed to make the best decisions. Intelligence Reporting helps you come to grips with your business's data, so you can make business decisions with confidence.

With Intelligence Reporting, you can easily analyse the data that has an impact on your business. Using dashboards, you can get the bigger picture of what's going on in your business. You can also drill down into the details of the information at your fingertips to see how the numbers are made up.

With accurate insights into your data you'll have the confidence to make timely, more informed business decisions.

¹This statistic comes from a survey Sage conducted with customers in 2015.

sage 50 ME Edition Intelligence Reporting

Features and functions

Intelligence Reporting is equipped with the following features to help you effectively run your business:

- Interactive dashboards and report views
- Familiar Excel viewing and tools
- Real-time data automatically pulled from Sage 50 into Excel
- Ready-to-use reports from day one
- Fully customisable reports
- Drag-and-drop report design
- Flexible reporting and user parameters
- Easy filtering and roll-up summarisation
- Automated report distribution

Components

Report Viewer—The Report Viewer allows you to run out the relevant reports. It comes with the basic filtering capabilities and drill-down functionality on existing reports.

Report Manager—The Report Manager allows you to author new reports (organizing, creating, and editing), and filter and aggregate data. This tool also allows you to set permissions and security for reports.

Report Designer—This Excel add-in allows you to easily create and edit financial statements using a graphical “drag-and-drop” interface, giving you full control of your financial reports.

Connector module—The Connector module allows you to access and consolidate information from multiple sources. This allows you to connect to more than one database at a time and enables you to do multicurrency or multicurrency consolidations.

“Sage Intelligence Reporting adds huge value to Sage users and business owners alike. It is exactly because I am a business owner, and not an accountant, that I can say that Intelligence Reporting offers real value.”

Ashu Upa, Owner and Managing Director, Azuma Networks
